Assignment 1: Maximum CPU rates - ITCS 4182

Meghana Gudaram ID: 800962452

Machine used for this experiment: Intel(R) Xeon(R) CPU E5-2667 v3 @ 3.20GHz

```
: 0 // there are 2 processors with 8 cores each
processor
vendor id
               : GenuineIntel // Intel processors, Haswell arch
cpu family
               : 6
model
               : 63
               : Intel(R) Xeon(R) CPU E5-2667 v3 @ 3.20GHz
model name
stepping
               : 0x36
microcode
               : 3321.375 // CPU clk is approximately 3.2 GHz
cpu MHz
cache size
               : 20480 KB
physical id
               : 0
siblings
               : 8
               : 0
core id
            : 8 // 8 Cores on each processor
cpu cores
```

```
Intel Haswell,
                   16 DP FLOPs/cycle: two
                                             32 SP FLOPs/cycle: two
Intel Broadwell
                   4-wide FMA
                                             8-wide FMA instructions
                                             \rightarrow S = 32
and Intel Skylake | instructions
```

Maximum number of floating point operations this machine can perform per second Socket * Core * Frequency * FPA * OP / S

```
= 2 * 8 * 3.2 * 10^{9} * 2 * 2 * 256 / 32 = 1638 GFlops/cycle or 1.638 TFlops/cycle
```

Maximum number of integer operations this machine can perform per second Socket * Core * Frequency * FPA * OP / S

```
= 2 * 8 * 3.2 * 10^9 * 3 * 1 * 256 / 32 = 1228 Glops/cycle or 1.228 TFlops/cycle
```

A code that gets peak Flops

```
m256 fma()
  m256 x = mm256 setr ps (1.2, 2.2, 3.2, 4.2, 5.2, 6.2, 7.2, 8.2);
  m256 y = mm256 setr ps (10.1, 20.1, 30.1, 40.1, 50.1, 60.1, 70.1, 80.1);
  m256 z = mm256 setr ps (1.1, 2.1, 3.1, 4.1, 5.1, 6.1, 7.1, 8.1);
for (long long i=0; i<10000000; ++i)
 z = mm256 fmadd ps(x, y, z); // this intrinsic function fuses fma
return z;
} // complete code at https://github.com/MeghanaGudaram/HighPerformanceComputing
```

A code that gets peak lops

```
__m256 faddsub()
{
    __m256 x = _mm256_setr_ps (1.2, 2.2, 3.2, 4.2, 5.2, 6.2, 7.2, 8.2);
    __m256 y = _mm256_setr_ps (10.1, 20.1, 30.1, 40.1, 50.1, 60.1, 70.1, 80.1);
    _m256 z = _mm256_setr_ps (1.1, 2.1, 3.1, 4.1, 5.1, 6.1, 7.1, 8.1);
    for (long long i=0; i < 10000000; ++i)
    {
        z= _mm256_faddsub_ps(x, y); // this intrinsic function fuses avx and calculates iops
    }
    return z;
} //complete code at <a href="https://github.com/MeghanaGudaram/HighPerformanceComputing">https://github.com/MeghanaGudaram/HighPerformanceComputing</a>
```

Assembly code to make sure if fma and avx are fused along with for loop: .LFB6238:

```
.cfi_startproc

movl $1000000, %eax // for loop is not optimized

vmovaps .LC0(%rip), %ymm0

vmovaps .LC1(%rip), %ymm2

vmovaps .LC2(%rip), %ymm1
```

	Double Precision	Single Precision	Double Precision	Single Precision
	Packed FP	Packed FP	Scalar FP	Scalar FP
Fused Multiply-Add A = A x B + C C += A x B	VFMADD132PD VFMADD213PD VFMADD231PD _mm_fmadd_pd() _mm256_fmadd_pd()	VFMADD132PS VFMADD213PS VFMADD231PS _mm_fmadd_ps() _mm256_fmadd_ps()	VFMADD132SD VFMADD213SD VFMADD231SD _mm_fmadd_sd() _mm256_fmadd_sd()	VFMADD132SS, FMADD213SS VFMADD231SS _mm_fmadd_ss() _mm256_fmadd_ss()

.L2:

```
vfmadd231ps %ymm1, %ymm2, %ymm0 // vfmadd231ps make sure fma is fused
subq $1, %rax
jne .L2
rep ret
```

Similarly for iops:

```
.L15:
    cmpq $9999999, -56(%rbp)
    jg .L13
    vmovaps -144(%rbp), %ymm0
    vmovaps %ymm0, -112(%rbp)
    vmovaps -208(%rbp), %ymm0
    vmovaps %ymm0, -432(%rbp)
    vmovaps -112(%rbp), %ymm0
    vaddsubps -432(%rbp), %ymm0
    vaddsubps -432(%rbp), %ymm0, %ymm0 // vaddsubps make sure avx fused vmovaps %ymm0, -48(%rbp)
    addq $1, -56(%rbp) jmp .L15
```

Flops code achieved:

```
[mgudaram@mba-i1 ~]$ g++ -std=c++11 -mavx2 -mfma flop.cpp [mgudaram@mba-i1 ~]$ ./a.out
Time taken for 10^7 flops : 59604.9 useconds.
[mgudaram@mba-i1 ~]$ g++ -std=c++11 -mavx2 -mfma -0 flop.cpp [mgudaram@mba-i1 ~]$ ./a.out
Time taken for 10^7 flops : 0.115 useconds.
[mgudaram@mba-i1 ~]$ g++ -std=c++11 -mavx2 -mfma -01 flop.cpp [mgudaram@mba-i1 ~]$ ./a.out
Time taken for 10^7 flops : 0.094 useconds.
[mgudaram@mba-i1 ~]$ g++ -std=c++11 -mavx2 -mfma -02 flop.cpp [mgudaram@mba-i1 ~]$ ./a.out
Time taken for 10^7 flops : 0.094 useconds.
```

From the figure time taken before optimization:

```
10^7 Flops = 5.9 * 10^{-2} \rightarrow 1 Flop = 5.9 * 10^{-9} sec, frequency is 0.16 GFlops
```

From the figure time taken after optimization:

```
10^7 Flops = 1.15 * 10^{-5} \rightarrow 1 Flop = 1.15 * 12 sec, frequency is 868 GFlops or 0.86 TFlops
```

Iops code achieved:

```
[mgudaram@mba-i1 ~]$ g++ -std=c++11 -mavx2 -mfma Iop.cpp [mgudaram@mba-i1 ~]$ ./a.out Time taken for 10^7 operations : 22656.2 useconds. [mgudaram@mba-i1 ~]$ g++ -std=c++11 -mavx2 -mfma -0 Iop.cpp [mgudaram@mba-i1 ~]$ ./a.out Time taken for 10^7 operations : 0.104 useconds. [mgudaram@mba-i1 ~]$ g++ -std=c++11 -mavx2 -mfma -01 Iop.cpp [mgudaram@mba-i1 ~]$ g++ -std=c++11 -mavx2 -mfma -01 Iop.cpp [mgudaram@mba-i1 ~]$ g++ -std=c++11 -mavx2 -mfma -02 Iop.cpp [mgudaram@mba-i1 ~]$ g++ -std=c++11 -mavx2 -mfma -02 Iop.cpp [mgudaram@mba-i1 ~]$ ./a.out Time taken for 10^7 operations : 0.096 useconds.
```

From the figure time taken before optimization:

```
10^7 \text{ Iops} = 2.2 * 10^{-2} \rightarrow 1 \text{ Iops} = 2.2 * 10^{-9} \text{ sec, frequency is } 0.4 \text{ Glops}
```

From the figure time taken after optimization:

```
10^7 \text{ Iops} = 1.04 * 10^{-5} \implies 1 \text{ Iops} = 1.04 * 12 \text{ sec, frequency is } 961 \text{ Glops or } 0.96 \text{ Tlops}
```

Expectation Vs Results

```
FLOPs: 0.86/1.638 = 0.525 only 52.5% is utilized by the CPU
IOPSs : 0.96/1.228 = 0.781 \rightarrow only 78.1% is utilized by the CPU
```

Conclusion: Yes, code could be written better to utilize the CPU (there by utilize architecture to the fullest). Lower FLOP/s are often an indication of significant latencies and overall performance bottlenecks. Workloads with low mask register utilization may have over counted the FLOPs value. In order to vectorize traditional SIMD reduction loops, compilers often have to do special post-processing, which could be seen as expensive vectorization overhead.
